github.com/idorobots

Software Engineer with broad full-stack experience across diverse technologies and a strong interest in project management. I stay hands-on while contributing end-to-end — from requirements gathering and product development to architecture, implementation and infrastructure operations.

Experience

Riot Games (via Appliscale sp. z o. o.)

Leading the Social Infrastructure team of 3-5 senior engineers responsible for player voice & text chat, and game signalling in multiple Riot Games titles, including League of Legends, Valorant & 2XKO. Directly responsible for services handling in excess of 5m concurrent connections and 50k RPS.

2023-04 – present **Lead Software Engineer**, *Erlang/OTP, Go, C/C++, Ejabberd, Terraform, AWS ElastiCache, AWS Aurora, AWS SQS, Apache Kafka, Kubernetes, Cloudflare, Delivery Management, Jira*

- Implemented an agile SCRUM-based development process improving capacity planning and delivery success.
- Improved stability accross the system, reducing toil and decreasing PagerDuty incidents number by 75% and MTTR by 30%.
- Implemented several AWS infrastructure modernization projects reducing running cost by $800k annually.
- Facilitated and supported multiple modernization projects for our partners in China (Tencent).
- Lead a project of integrating with Discord chat services on the infrastructure side.
- Created an agentic AI internal support ticket helper that reduced MTTR by a significant margin.

StackState BV (now SUSE Observability, Xebia Group)

Developed an AIOps Observability product enabling greater visibility of the infrastructure, initially as a software engineer and later additionally assuming more product management responsibilities.

2021-05 – 2022-11 **Technical Product Manager**, *Business Analysis, Delivery Management, GTM, JTBD, Jira*

- Led a feature team of 6-10 frontend, backend & QA engineers, implementing a successful SCRUM-based development process.
- Managed an interactive playground & SaaS trials project from initial idea to a successful launch.
- Designed and created initial user onboarding flows increasing user engagement with the Playground.
- Managed a critical monitoring feature from initial requirements gathering to a successful launch.

2018-03 – 2022-11 **Senior Software Engineer**, *Scala/Akka/ZIO, TypeScript/React, Go, Python, ElasticSearch, Helm, Kubernetes, Terraform, AWS, GitHub Actions*

- Designed and implemented a flexible system of plugins - StackPacks that allowed us to quickly develop integrations and secure key customers during PoCs.
- Integrated various data sources including: ElasticSearch, Logz.io, Splunk, AWS CloudWatch and Azure Monitor, creating a basis for the platform integration team to work off.
- Improved the backend security by introducing Groovy script sandboxing and Java Security Manager policies thus helping with achieving SOC2 compliance.
- Contributed across the full stack, including DevOps, backend and frontend work.

Closer.app (formerly Ratel.io, Contactis Group sp. z o. o.)

Built an AI- & WebRTC-powered VoIP communications platform - Ratel.

2016-05 – 2017-10 **Senior Software Engineer**, *Scala/Akka/Cats, PostgreSQL, TypeScript/React, Docker, Ansible*

- Built a WebRTC-heavy open-source product SDK of which I am still a majority contributor.
- Implemented an internal communicator web-app capable of direct and group chats as well as audio/video calls, including large-scale conferences.
- Architected and implemented the Ratel infrastructure based on Docker and Ansible incepting a DevOps culture within the company.
- Introduced Wartremover and Scalastyle to most of the backend code improving the code quality.
- Scaled the initial team of 5 engineers to around 30, including interviewing & mentoring engineers.

Ubiquiti Networks

Developed the airCRM product for Ubiquiti's WISP customers, focusing mostly on invoicing, payments processing & device telemetry.

2014-10 – 2015-12 **Software Developer**, *Clojure/Ring, Erlang/OTP, Python/Django, Cassandra, Redis, Riak, PayPal, Stripe.js, Authorize.Net*

- Designed and implemented a generic payment processing microservice and integrated it with Authorize.Net, Stripe and PayPal payment gateways.
- Prepared the payments code-base for a full PCI-DSS compliance audit which passed without issue awarding the product with PCI-DSS compliance certificate.
- Integrated the payments microservice with a complex Python- & Erlang-based CRM system.

Brainly.com (Zadane.pl sp. z o. o.)

Developed and improved scalability of the company's real-time interaction-rich education and collaboration platform.

2013-05 – 2014-08 **Erlang Developer / DevOps**, *Erlang/OTP, Python, Redis, Ansible, Socket.IO*

- Created a stress testing tool called Flood in order to identify scalability deficiencies of the existing user-facing session management microservice.
- Implemented a more efficient & generic solution called Hive, leveraging Erlang & the existing Python knowledge within the company.
- Performed thorough stress testing of the existing and replacement solutions proving large performance gains (in excess of 100% more client connections per instance).
- Advocated for and eventually prepared open-source releases of both Hive and Flood.

Selected Open Source contributions

github.com/idorobots

2026-02 – present **Org-Mode CLI**, *Python, Emacs Org-Mode, GitHub Actions*

A CLI tool for managing Emacs Org-Mode archives outside of Emacs.

2015-01 – present **The `Spartan` programming language**, *PL research, Scheme, Racket, JavaScript, GitHub Actions*

A programming language I started developing during my masters thesis research. The goal is to create an optimizing compiler & a scalable runtime system for a Lisp-like language including, among other features, hygienic macros, rule-based knowledge engineering and an actor-model-based concurrency inspired by Erlang/OTP.

2019-03 – 2019-05 **Marlin 3D printer firmware**, *C/C++, PlatformIO, ARM, ESP32, LPC1768*

Contributed multiple features and bug-fixes for the LPC1768 and ESP32 platforms: improving thermal protection mechanisms and general end-user safety, display screen handling, and network reliability.

Education

2014-02 – 2015-09 **Master of Engineering in Computer Science: Engineering of Intelligent Systems**,
AGH University of Science and Technology, Kraków, Poland

2010-10 – 2014-02 **Bachelor of Engineering in Computer Science**,
AGH University of Science and Technology, Kraków, Poland

Skills

spoken languages	**English** (proficient, CEFR C1 certified - FCE grade A), German (CEFR B1), Polish (native)
product lifecycle	**Lean Agile**, **GTD**, SCRUM, Jobs To Be Done, Google Analytics, HotJar, Atlassian Jira
software design	**Functional Programming**, OOP, Microservices, REST, SOA, Event Sourcing
programming	**Golang**, **Erlang/OTP**, Scala/Akka/ZIO, TypeScript, React/Redux, Python, Clojure, Java
electronics	KiCAD, Sigrok, GHDL/gtkWave, Lab Equipment Usage, Verilog
databases	**AWS Aurora**, **AWS ElastiCache**, ElasticSearch, PostgreSQL, Redis, Riak, Cassandra
toolchain	**Agentic AI**, **GNU/Linux**, **Emacs**, **Git**, GitHub Actions CI/CD, Org-Mode, LaTeX
cloud	**AWS**, **Docker**, **Terraform**, Ansible, Kubernetes

Hobbies

- Bouldering & Tennis
- Programming Language design
- 3D printing & product prototyping
- Experimental computer archaeology
